

SEALANT Study

Name: René Chapot

Affiliation: Alfried Krupp Hospital

The SEALANT study is a prospective multicenter study in the treatment of aneurysms. The goal is to evaluate the safety of using the LVIS EVO stent and to demonstrate the stability of occlusion when treating aneurysms with a combination of hydrocoils and LVIS EVO.

Inclusions in the study were ended in August 2023.

The first results of the study are presented.
